

More trees to be cut down in Crescent City

January 22, 2022

Several more trees - 22 of them - will be removed in Crescent City at and near Beachfront Park.

The latest batch of trees to be removed were inspected as part of a recent study by an arborist, who also determined last year that a cluster of 70-year-old Monterey Cypress trees in front of the Crescent City Library also need to be removed due to bacterial and fungal infections.

Turner Chopping, LLC will be removing the most recently-identified trees for \$12,605, which will be funded through the city's Risk Management Accreditation Program.

RMAP funds are rebates that go back to the city through the Golden State Risk Management Authority insurance program, which allows city officials to use the monies to improve safety and reduce risk and liability.

The city has used some of its RMAP funds in the past for safety-related improvements, such as sidewalk grinding, playground repairs and updated vests for the police department.

The types of trees to be cut down include eucalyptus, cedar, pine and cypress trees. Over half of them are located behind the Cultural Center, and the rest are near the Fred Endert Pool, Beachfront Park, the Del Norte Library parking lot and the parking lot on Front Street between G and H Streets.
